

**Prateek Khera**

Next.js / Full Stack Developer  
Indore, India

Dear Hiring Manager,

I am writing to apply for the Next.js Developer position at Capgemini. With hands-on experience in building scalable, production-grade web applications using Next.js, React, and TypeScript, I am excited about the opportunity to contribute to Capgemini's technology-driven, people-first culture.

Currently, I work as a Software Engineer at Indas Analytics, where I collaborate on a Next.js 15 frontend integrated with ASP.NET Core (.NET 8) backend services. My responsibilities include building component-based React architectures, consuming REST APIs, and developing high-performance dashboards that visualize real-time GPS and operational data for daily business use.

I have practical experience working with modern Next.js features such as server-side rendering (SSR), API routes, and optimized data-fetching strategies to balance performance and scalability. I focus strongly on clean code, reusability, performance optimization, and Core Web Vitals, ensuring responsive user experiences and maintainable codebases. My work regularly involves TypeScript for strong typing and long-term application stability.

Beyond technical skills, I value collaborative development and take ownership of features from design through deployment. I enjoy working closely with cross-functional teams to translate business requirements into reliable, user-focused solutions.

Capgemini's commitment to innovation, sustainability, and inclusive growth strongly resonates with me. I am eager to grow within an organization that empowers engineers to shape their careers while delivering meaningful technology solutions at scale.

Yours sincerely,

**Prateek Khera**
